PostureScreen "Internet System" EHR connector

There are three fields when setting up the connector:

- Internet System Name - This is for the user so they know what the connector is called. We do nothing with this except display it
- Website URL - The user is expected to provide the https:// scheme prefix. They pass any params they might need in the URL. We don't add any of our own URL params.
- Vendor Key - This is added to the JSON we post. If no key is provided, a field is not added.

We post to the URL the following:

- JSON file with name of screening.json . Contents detailed below.
- PDF for the screening with the name ScreeningDATEPATIENTID.pdf e.g. Screening201504010046340000.pdf
- If there is a right rendered PostureScreen image a file with the name Right_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg e.g. Right_Han-Solo_2015-03-31.jpg
- If there is a front rendered PostureScreen image a file with the name Front_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg
- If there is a left rendered PostureScreen image a file with the name Left_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg
- If there is a back rendered PostureScreen image a file with the name Back_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg
- If there is a right rendered LeanScreen image a file with the name LeanScreen_Right_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg
- If there is a front rendered LeanScreen image a file with the name LeanScreen_Front_PATIENTFIRSTNAME-PATIENTLASTNAME_DATE.jpg
- If there are any Motion Capture screen captures a file with the name MotionCaptureStillNUMBER.jpg e.g. MotionCaptureStill1.jpg, MotionCaptureStill2.jpg

The JSON file contains clinic address information, patient information, screening information, exercises if any prescribed, LeanScreen information if a LeanScreen has been finished and the EHR Connector software key if provided.
